Summary

AI & Data Engineer with 6 years of experience designing and delivering enterprise data engineering and AI-ready data solutions across telecom, transportation, and manufacturing sectors. Demonstrates hands-on expertise in cloud ecosystems across AWS, Azure, and Snowflake, alongside proficiency in Python, SQL, PySpark, ETL/ELT pipelines, metadata-driven frameworks, and production-scale orchestration. Proven track record of engineering 250+ ingestion pipelines across 35+ sources and orchestrating highly robust enterprise workflows for Tier-1 client. Adept at production performance optimization, data quality engineering, cross-environment deployments, and scaling data integration platforms. Currently driving end-to-end data enablement by advancing RAG capabilities using xLytix, an AI-powered platform, across the insurance, education and other domains.

Professional Experience

UXLI Limited, Milton Keynes, United Kingdom *10/2020 – Present | Remote - India*
Entity: UXLI Consulting Pvt Ltd, Hyderabad, India

Consultant - Data and AI Engineering *10/2025 – Present*
Product: xLytix - AI-Enterprise Intelligence Platform

- Lead end-to-end project builds while driving client-facing PoCs and two-week pilots spanning data ingestion, transformation, modelling, AI-ready datasets, RAG/ML-oriented workflows, and KPI-driven dashboards across Insurance, Education, and Operations domains
- Deliver tailored product demonstrations using customized datasets and domain-specific use cases; translate client requirements into working AI-ready data solutions.
- Evaluate product capabilities, identify defects and product gaps, and collaborate with product and engineering teams to deliver enhancements that improve scalability and enterprise readiness.

Senior Data Engineer *04/2023 – 09/2025*
Client: StarHub, Singapore | Legacy Netezza DWH migration to Snowflake | Customer 360 (C360) – Unified Cloud Data Platform

- Engineered 250+ ingestion pipelines across 35+ heterogeneous source systems, integrating databases, Salesforce, SFTP, and Amazon S3 into Snowflake using full, incremental, and deduplication-based loading patterns via Data Pipes (an Airbyte and Airflow-based ETL/ELT tool).
- Orchestrated 60 workflows and 820+ integration objects, coordinating Data Pipes pipelines, Snowflake tasks, stored procedures, execution schedules, and sequential or parallel dependencies.
- Co-designed Raw, Modelled, and Information data layers by collaborating with stakeholders across IVR, Salesforce, Compax, and other source domains; implemented workflow orchestration linking ingestion with downstream Snowflake transformations and business-consumption views.
- Contributed to enhancing Data Pipes Tool by identifying 120+ bugs, features, and enhancements; collaborated on FastAPI-driven object deployment and AWS CI/CD pipeline automation across environments (DEV/SIT/PROD).
- Led production performance and go-live validation efforts, coordinating infrastructure scaling, pipeline reinitialization, data backfills, and data-quality checks to help achieve an approximately 95% on-time job success rate and reduce execution times from hours to minutes.
- Mentored junior engineers on ingestion approaches and best practices, successfully accelerating project ramp-up timelines.
- Coordinated across a multi-vendor delivery environment, aligning with solution/data architects, client stakeholders, source-system owners, modeling teams, project managers, and third-party vendors.

Cloud Data Engineer *03/2022 – 04/2023*
Clients: Vodacom, South Africa (DWH Migration & Modernization - AWS) | John Bean Technologies (JBT), USA (Azure Synapse Analytics)

- Developed PySpark-based data transformation and cleansing jobs for telecom client using AWS Glue, processing data from Amazon S3 and applying client-provided source-to-target mappings and enterprise data model requirements.
- Collaborated in implementing metadata-driven ETL and orchestration framework using AWS Glue, Redshift, Lambda, Step Functions, and EventBridge which enabled automated redshift stored procedure execution, workflow dependency management, and supporting ingestion and transformation loads for vodacom.
- Engineered data pipelines using a dynamic ADF framework for a manufacturing client, orchestrating the daily ingestion of approximately 0.5 million CSV files (20K–30K files per hour) from an SFTP server into Azure Synapse Analytics via Azure Data Lake; integrated Azure Functions to support additional event-driven data extraction capabilities.

Software Engineer Trainee *01/2021 – 03/2022*

Client: Transport for Wales Rail (TfW Rail), United Kingdom | Azure Ticketing Platform and Performance Analytics

- Co-developed a unique dynamic, configuration-based Azure ADF framework that standardized ingestion across diverse file types, databases, data warehouses, SFTP, and Data Lake with automated scheduling, pipeline dependencies, and robust error handling to deliver a highly reliable and scalable solution that eliminated scratch-building for new azure based analytical projects.
- Implemented the ADF framework to build pipelines using a medallion architecture, extracting JSON data from Azure Cosmos DB via Azure Data Lake into Azure Synapse Analytics; replicated this framework to extract CSV and Excel data from SFTP and email sources across 5 sub-projects, centralizing the performance analytics platform.
- Contributed in the end-to-end SDLC (requirements to go-live) for Azure-based web ticketing and performance analytcis platform, optimizing performance by resolving REST API latency from seconds to milliseconds and configuring automated Azure threshold email alert mechanism using azure log monitoring

Intern *10/2020 – 12/2020*

- Assisted in evaluating in-house data frameworks through the development of functional POCs.
- Gained foundational skills in AWS, Azure, GCP, Git, and web technologies.

Technical Skills

Languages & Frameworks: Python, SQL, PySpark, Pandas, NumPy, Scikit-learn, PyTorch, Hugging Face, LangChain
Data & Cloud Platforms: Azure (ADLS Gen2, ADF, Synapse, Cosmos DB, Functions), AWS (S3, Glue, Lambda, Step Functions, Redshift), Snowflake (Snowpark, Tasks, Streams)
AI & Data Engineering: GenAI, RAG, LLMs, MLOps/ML Pipelines, ETL/ELT, Data Modeling, Data Warehousing, Orchestration
Open Source Tools & DevOps: Apache Spark, Airflow, DBT, Airbyte, ClickHouse, Apache Superset, Git/GitHub, Azure DevOps, CI/CD, Postman

Certifications

SnowPro Core: *Snowflake Inc.* | **OCI Generative AI Professional:** *Oracle* |
Microsoft Azure Data Fundamentals: DP-900: *Microsoft* | **Microsoft Azure Fundamentals: AZ-900:** *Microsoft*

Projects

- **Intelligent-Loan-Approval-System**
  Built an end to end supervised ML Pipeline using KNN, Logistic Regression and naive bayes to predict loan approval. implemented binary classification along with EDA, feature engineering & Model Evaluation (Precision, recall, F1)
- **FoodDelivery-AI-Data-Engineering-End-To-End-Project**
  ELT pipeline that ingests AWS S3 data into Snowflake using Airflow and transforms it through a 3-tier dbt medallion architecture. Integrated OpenAI layer to power LLM review enrichment, RAG chat, and text-to-SQL capabilities.

Awards

- UXLI Limited - Rising Star of the Year 2021
- UXLI Limited - Star of the Month*:* Multiple recognitions (2021- present)

Education

Bachelors of Engineering (Mechanical) *07/2016 – 07/2020 | Pune, India*
Savitribai Phule Pune University (CGPA: 8.37/10 - First Class with Distinction)

Languages

English (Full Professional) | Hindi & Marathi (Native) | German & French (Elementary)
